Detailed Action

Claims Rejection - 35 U.S.C. 102(b)

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that

form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United

States.

2. Claims 1-3, 5, 9, 10, 13 and 14 are rejected under 35 U.S.C. 102(b) as being

clearly anticipated by Polhemus (U.S. Patent No. 368,003).

Polhemus discloses a tool comprising a body having two integrally formed

handles (a) and a contact surface/projection (D) with a blade (G) having two ends, one

of which contacts a workpiece during use, the contact surface (D) including a recessed

portion (d), wherein at least a portion of the body (D, see Fig.3) extends beyond the end

of the blade (G) opposite the workpiece contacting blade end, a clamp bar (K) having a

second contact surface for contact with the blade (G, see Fig.2), means (L) in the form

of a screw for securing the clamp bar (K) to the body (D), and the clamp bar (K) having

a chamfer (k, see Fig.2) as claimed.

Claims Rejection - 35 U.S.C. 103(a)

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 4 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Polhemus (U.S. Patent No. 368,003).

Polhemus as set forth shows a hand tool substantially as claimed except

Polhemus uses one screw (L) rather than "screws" for securing the clamp bar (K) to the body (D).

However, the claimed plural "screws" are not patentably distinct over Polhemus' single screw (L), since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. St. Regis Paper Co. v. Bemis Co., Inc., 193 USPQ 8 (7th Cir. 1977).

3. Claims 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Polhemus (U.S. Patent No. 368,003) in view of Bodmer (U.S. Paten No. 1,098,706).

Polhemus' tool as set forth shows all the claimed structure except for an adjustment screw.

Bodmer shows an adjustment screw (11) for adjusting the camber of a blade (8).

It would have been obvious to one skilled in the art to modify Polhemus by providing the tool with an adjustment screw in order to facilitate bending of the blade slightly back at the center for an easier operation of the tool (see column 2, lines 85-89) as taught by Bodmer.

Indication of Allowable Subject Matter

Claims 6 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
